Data Flow Diagram – Project Work Assignment

FitBuddy – AI Fitness Plan Generator using Gemini Models

Team ID	unm293200909
Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models
Name	Kavyasri.A
Assigned Work	Data Flow Diagram (DFD)

Assigned Responsibility

Kavyasri.A is assigned to prepare the Data Flow Diagram (DFD) for the FitBuddy project. The work should show how data moves through the system between external entities, processes, and data stores, following the symbol structure in the provided reference.

Work to Be Completed

1. Identify the external entities involved in the FitBuddy system.

2. Identify the major processes that transform user input into fitness-plan output.

3. Identify the data stores used by the system.

4. Connect the entities, processes, and data stores using clearly labelled data-flow arrows.

5. Prepare a neat and readable DFD suitable for project submission.

DFD Components to Include

Component	Purpose
External Entity	Represents a person, organization, or system outside the project that sends or receives data.
Process	Represents an activity that transforms incoming data into outgoing data.
Data Store	Represents a place where project data is held for later use.
Data Flow	Shows the movement of data between entities, processes, and data stores and should be labelled.

Reference: The uploaded DFD reference states that a DFD should show how data moves through a system between external entities, processes, and data stores, using labelled arrows for data flow. ■filecite■turn0file0■L7-L9■
