Project Executable Files

Date	15 March 2026
Team ID	unm293200909
Project Name	FitBuddy - AI Fitness Plan Generator using Gemini Models
Name	Kavyasri.A
Maximum Marks	3 Marks

Project Executable Files

This section lists all executable files for the FitBuddy project. The evaluator can run the solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	**Yes**
2	README / Setup Guide (instructions to run the project)	**Yes**
3	requirements.txt / package.json / dependency file	**Yes**
4	Database schema / seed files (if applicable)	**Yes**
5	Environment configuration file (.env.example or similar)	**Yes**
6	Deployed application URL (if hosted)	**NA**
7	APK / Executable binary (if applicable for mobile/desktop apps)	**NA**
8	Dockerfile / Containerization config (if applicable)	**NA**
9	Test files and test results	**Yes**
10	Demo video or walkthrough (if required)	**Yes**

Step 2: File / Folder Structure

Overview of the project's file and folder structure:

```
/fitbuddy-project
|-- app/                          Python source files
|   |-- main.py                   FastAPI app entry point
|   |-- routes.py                 Routes: /, /generate-workout,
|   |                             /submit-feedback, /view-all-users
|   |-- gemini_generator.py       7-day plan (Gemini 1.5 Pro)
|   |-- gemini_flash_generator.py   Nutrition tip (Gemini Flash)
|   |-- updated_plan.py           Feedback-based plan update
|   `-- database.py               SQLAlchemy models and SQLite functions
|-- templates/                    index.html, result.html, all_users.html
|-- static/images/                Images and assets
|-- README.md                     Setup and run instructions
|-- requirements.txt              Python dependencies
`-- .env.example                  Gemini API key configuration
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not hosted. The application runs locally at http://127.0.0.1:8000
Login Credentials (Demo)	Not required. The application has no login.
Platform / Hosting Provider	Local deployment using Uvicorn (ASGI server)
Repository Link	*[Paste your GitHub link here]*
Demo Video Link	*[Paste your demo video link here]*

Step 4: Run Instructions

Step-by-step instructions to run the project locally:

Pre-requisites:
Python 3 and pip, Git, a Google Gemini API key and an internet connection.

Step 1: Clone the repository: git clone <url>
Step 2: Create and activate a virtual environment: python -m venv fitbuddy-env, then fitbuddy-env\Scripts\activate (Windows)
Step 3: Install dependencies: pip install -r requirements.txt (fastapi, uvicorn, jinja2, sqlalchemy, python-multipart, google-generativeai)
Step 4: Configure environment: copy .env.example to .env and add your Gemini API key
Step 5: Start the application: uvicorn app.main:app --reload
Step 6: Open the browser at http://127.0.0.1:8000 (API docs at /docs)

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Needs an internet connection and a valid Gemini API key to generate plans and tips.	Set the API key in .env before starting the app.
2	Response time depends on the Gemini API, so plan generation can take a few seconds.	Expected behaviour; a loading message can be shown.
3	No user login; the admin dashboard (/view-all-users) is open to anyone who can reach the app.	Future improvement: add authentication.

Work Assignment:

Work Assigned	Assigned To
Prepare source code, README, requirements.txt and .env.example	Kavyasri.A
Organise the folder structure and push the project to GitHub	Kavyasri.A
Test the run instructions on a clean setup	Kavyasri.A
Record the demo video and complete this report	Kavyasri.A
